

RE: Please oppose the Federal Research Public Access Act, S. 2096

March 5, 2012

The Honorable Joseph I. Lieberman
Chair
Committee on Homeland Security and
Governmental Affairs
340 Dirksen Senate Office Building
Washington, DC 20510

The Honorable Susan M. Collins
Ranking Member
Committee on Homeland Security and
Governmental Affairs
344 Dirksen Senate Office Building
Washington, DC 20510

Dear Chairman Lieberman and Ranking Member Collins:

On behalf of the Professional and Scholarly Publishing Division of the Association of American Publishers and the DC Principles Coalition, we are writing to express our strong opposition to the Federal Research Public Access Act, S. 2096, a bill which would require the final manuscripts of peer-reviewed, private-sector journal articles authored by federally-funded researchers to be made freely available to the world through federal agency websites no later than six months after their publication in journals.

This unnecessary legislation would put federal agencies in direct competition with non-profit and commercial publishers' efforts to produce and disseminate validated and digitally-enhanced journal articles that explain the nature and results of federally-funded research. It would also undermine the journal publishers' exercise of their copyrights in such materials and adversely impact the peer review system that ensures the high quality and reliability of scientific and other scholarly research in the United States. In addition, it would impose costly new mandates on federal agencies, requiring them to divert critical research funding to create and manage new databases, archives and infrastructure that will be largely duplicative of those already existing in the private sector.

The diverse U.S. journal publishing community represented by the signatures below is devoted to ensuring wide dissemination of the results of all peer-reviewed research, including research supported by federal funding; in fact, journal publishers have invested millions of dollars in technologies and innovations that enable high-quality digital peer review, production, distributions, interoperability and discovery of the latest scientific and scholarly works, and have been collaborating with federal agencies and other stakeholders to improve access to such works by all who need it. But the proposed legislation simply ignores new publisher business models that can provide immediate access to articles for patients, journalists or through public libraries, at little or no cost, and embodies a "one-size-fits-all" mandate for public access that would discourage future publisher collaboration with federal agencies.

In considering how to promote public access to the results of federally-funded research, Congress has *already* concluded that the best approach is to encourage and develop collaborative efforts among all stakeholder communities.

Consistent with recommendations of a group of academics, librarians and publishers that comprised the "Scholarly Publishing Roundtable" convened by the House Science Committee in 2009, Congress enacted Section 103 of the America COMPETES Reauthorization Act of 2010 (P.L. 111-358) to direct the President's Office of Science and Technology Policy (OSTP) to coordinate a Cabinet-level process through a working group of the National Science and Technology Council to develop public access policies for research funded by federal agencies with extramural research budgets of over \$100 million.

OSTP has initiated this process with a Request for Information that has produced more than 375 public comments, which the working group is currently reviewing. Among its responsibilities, the working group has been instructed by Congress to recognize the "inherent variability" among federal agencies and scientific disciplines in the nature of research, types of data and dissemination models, and "the role that scientific publishers play in the peer review process in ensuring the integrity of the record of scientific research, including the investments and added value that they make." We strongly support these efforts and believe that S. 2096 constitutes a contradictory and unacceptable approach that should not substitute for the process that Congress has already designated for coordinating the development of federal science agency policies concerning public access to the results of federally-funded research.

By mandating the online posting of the final peer-reviewed manuscripts of journal articles by all major research-funding federal agencies, S. 2096 would undermine the economic viability of independent U.S. journal publishers through direct government competition. It would also compel American taxpayers to subsidize the acquisition of important research information by foreign governments and corporations that compete in global markets with the public and private scientific enterprises conducted in the United States.

Journal publishers support reasonable efforts by the Federal Government to make the results of publicly-funded research widely available, and they are ready to continue collaborating with federal agencies to achieve that objective; however, S. 2096 takes the wrong approach. We are available to meet with you or your staff, or anyone working on this issue in the federal government, to continue exploring the best way to achieve the public good. S. 2096 would take us in the opposite direction, risking significant collateral damage to U.S. research and competitiveness.

Sincerely,

Allan Adler
