The Honorable Fred Upton
The House of Representatives
Washington, DC 20515

The Honorable Frank Pallone
The House of Representatives
Washington, DC 20515

Dear Chairman Upton and Ranking Member Pallone:

On behalf of more than 140 publishers devoted to providing access to the latest research and discoveries, I am writing to express our strong support for Section 4009 of the 21st Century Cures Act. This provision exempts medical textbooks and peer-reviewed journals from burdensome CMS reporting requirements that have diminished the ability of physicians to consult the highest quality medical information.

Section 4009 will improve patient care by ensuring physicians have the latest research at their fingertips. While we support the transparency goals of the Sunshine Act, we believe that Section 4009 reflects the intent of Congress in providing an educational exclusion to the reporting requirement so that doctors can readily access materials that keep them informed and enable them to provide better care to their patients.

Our members, together with a wide range of organizations committed to ensuring the availability of peer-reviewed scholarly research, sent a letter last year to Congressmen Burgess and DeFazio in support of the Protect Continuing Physician Education and Patient Care Act (HR 293), upon which Section 4009 is based. I have attached a copy of this letter to indicate the breadth of support for these provisions.

On behalf of countless medical researchers, physicians, and the more than 38,000 Americans employed in scholarly publishing, we applaud Dr. Burgess, Congressman DeFazio, and the Energy and Commerce Committee for working to remove barriers that impede physician access to the most current medical information.

Sincerely yours,

A handwritten signature in black ink, appearing to read "John Tagler".

February 27, 2015

The Honorable Michael Burgess, MD
US House of Representatives
Washington, DC 20515

The Honorable Peter DeFazio
US House of Representatives
Washington, DC 20515

Dear Representatives Burgess and DeFazio:

The undersigned organizations write to thank you for introducing The Protect Continuing Physician Education and Patient Care Act, H.R. 293, and to express our support for the provision exempting medical textbooks and peer-reviewed journals from reporting requirements under the Sunshine Act.

The facts are straightforward: better informed physicians provide better care to patients. Making sure that medical professionals have access to the highest quality information should be a goal of public policy, and H.R. 293 does just that. Your legislation ensures that physicians' access to the highest quality publications in the world will remain unobstructed. Medical textbooks, consults, conference reports, journal articles and their reprints are written and published for the purpose of building upon and improving clinical understanding. These universally respected publications not only meet the rigorous standards of the highest quality peer-review and editing, but also provide impartial and independent information that provides direct benefit to patients through improved care.

Physicians routinely rank among the most respected professionals in the United States because of their understanding of the ever-changing science of medicine. That respect is built upon patients' trust that their healthcare professionals remain well-informed on the latest breakthroughs in health science. Maintaining an open channel for the flow of educational information is paramount to ensuring that patients continue to be cared for by informed physicians. Provision of these materials accrues directly to the benefit of patients and to improved healthcare for all Americans.

On behalf of countless medical researchers, physicians, and the more than 38,000 Americans employed in scholarly publishing, we thank you for introducing this important legislation which will remove barriers to ensuring that physicians are able to provide the best possible care to their patients through access to the most current medical information.

Sincerely,
